SUBJECT : opposition to oppose development due to natural resource concerns

Dear mpc,

Savannah Ogeechee Canal is writing to strongly oppose the development in the Fort Argyle area. The region is home to natural vital resources including forest, wetlands, rivers, and wildlife habitat to mention a few

Which are essential for maintaining ecological balance and community well being.

The proposed development threatens to disturb delicate ecological system diminish local biodiversity and potentially pollute of water sources

Once these natural resources are damaged they cannot be easily restored

Preserving this area is critical not only for environment health but for long term quality of life and our residents and future generations

I urge the mpc To reject this proposal and instead invest in sustainable planning that protects our natural resources.

Responsible stewardship today will prevent irreversible harm tomorrow

Thank you for your Attention and commitment to safe guarding our environment.

Sincerely

Connie Shreve
